Project Overview

Build an **Event Management System** where an admin can create multiple profiles and manage events across multiple users and timezones. where users can view, update, and create events, respecting their selected timezone.

Functional Requirements

Profiles

- Admin can create multiple user profiles by entering a name.
- No functionality is required for deleting profiles.

Event Creation

- Admin (or any user) can create events for one or multiple profiles at the same time.
- Event fields:
 - ☐ Profiles: Select one or more users.
 - ☐ Timezone: Pick a timezone for the event.
 - ☐ Start Date + Time: Calendar + time selector.
 - ☐ End Date + Time: Calendar + time selector.

Rules:

- End date/time cannot be in the past relative to the selected start date/time.
- Start and end times should respect the selected timezone of the user(s).

Event Viewing & Updating

- Users can view all events assigned to them.
- Users can update all events assigned to them.
- Each event stores:

- ❑ createdAt (timestamp in user timezone)
- ❑ updatedAt (timestamp in user timezone)

Multi-timezone handling:

- Each user can pick their own timezone.
- All events must display according to the user's selected timezone.
- Updating events should reflect properly across all users' selected timezones.

Bonus / Extra Credit

Event Update Logs:

- Whenever an event is updated, log the change.
- Show previous vs. updated values and the timestamp of the update in the user's selected timezone.
- If a user changes their timezone, all timestamps and logs should automatically convert to the new timezone.

Submission Requirements

1. Github repo link and Live preview link.
2. Video Link explaining the project and its nuances
3. submit here
